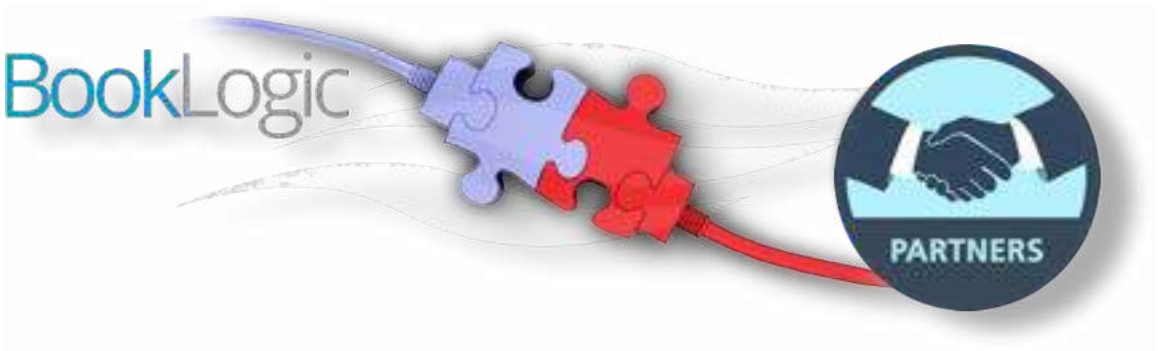
BookLogic

Partners Integration API - V5.3



Changelog

Version	Changes	Date	Updater
4	Added Hotels & HotelInfo methods	26/07/2022	Onour Mourteza
4.1	Added SubSource and New fields in HotelInfo Method	15/10/2022	Onour Mourteza
5.0	• Refactored all methods for case consistency and correct value types. • Rate Request: Switched to date range in request. • Availability Request: Switched to date range in request. • Hotel Info Response: Added new information. • SendReservation Request: Refactoring • SendReservation Request: Added taxes array for sending definitive taxes. • SendReservation Response: Added validation messages. • Added our statically defined types for mapping purposes.	22/11/2022	Onour Mourteza Chousein Chasan
5.1	• Added hotel and room facilities in the HotelInfo method.	02/12/2022	Chousein Chasan
5.2	• Added channel hotel codes in HotelInfo method for mapping purposes. (Agoda, Booking.com, Expedia, Hotelbeds)	23/01/2023	Chousein Chasan
5.3	• Added rate market information in the HotelInfo method. • Added pricing type in the GetRoomRates method. • Removed validation RP002 in the SendReservation method. This enables partners to send a reservation payment type as Hotel Collect without sending credit card information.	11/05/2023	Onour Mourteza Chousein Chasan

Table of Contents

1. GetRoomRates (Mandatory) **1**

2. RateSync (Mandatory) **4**

3. AllotmentSync (Mandatory) **8**

4. CCInValid (Optional) **11**

5. NoShow (Optional) **13**

6. SendReservation (Mandatory) **15**

7. HotelList (Optional) **23**

8. HotelInfo (Optional) **27**

9. BookLogic Static Types **35**

    9.1. Credit Card Types 35

    9.2. Guest Types 35

    9.3. Hotel Class Types 35

    9.4. Hotel Types 36

    9.5. Room View Types 37

    9.6. Room Category Types 38

    9.7. Meal Types 39

    9.8. Image Category Types 40

    9.9. Facility Types 41

1. GetRoomRates *(Mandatory)*

Description: This method is used for getting room details and rate information of a mapped hotel.

Prerequisites:

- Hotels have to be mapped.

URL: http://partnerURL?action=GetRooms

Type: POST

Request Parameters:

Data Field	Description	Data Type	Occurrences
roomRatesRequest	Root object	Object	1
roomRatesRequest/hotelId	Mapped hotel id	String	1
roomRatesRequest/password	Supplier password	String	1
roomRatesRequest/username	Supplier username	String	1

Request Body:

```
{
  "roomRatesRequest": {
    "hotelId": "hotelId",
    "username": "username",
    "password": "password"
  }
}
```

Response Parameters:

Data Field	Description	Data Type	Occurrences
roomRatesResponse	Root object of the response	Object	1
roomRatesResponse/successful	Status of the response	Boolean	1
roomRatesResponse/errors	Error message. Required if successful is set to false.	String	0..1
roomRatesResponse/rooms	Rooms array	Array	1
roomRatesResponse/roomRates/roomRateObject	RoomRate Object	Object	1..n
roomRatesResponse/roomRates/roomRateObject/roomId	Room ID	String	1
roomRatesResponse/roomRates/roomRateObject/roomName	Room Name	String	1
roomRatesResponse/roomRates/roomRateObject/rateId	Rate ID	String	1
roomRatesResponse/roomRates/roomRateObject/rateName	Rate Name	String	1
roomRatesResponse/roomRates/roomRateObject/maxPerson	Maximum Persons Allowed	Integer	1
roomRatesResponse/roomRates/roomRateObject/minPerson	Minimum Persons Allowed	Integer	1
roomRatesResponse/roomRates/roomRateObject/pricingType	Pricing type of the room rate	Integer	1

Response Body:

```
{
  "roomRatesResponse": {
    "successful": true,
    "errors": "",
    "roomRates": [
      {
        "roomId": "123a",
        "roomName": "Standard Room",
        "rateId": "54c",
        "rateName": "Fully Flexible",
        "maxPerson": 2,
        "minPerson": 1,
        "pricingType": "PerDayPricing"
      },
      {
        "roomId": "1224",
        "roomName": "Family Room",
        "rateId": "52",
        "rateName": "Fully Flexible",
        "maxPerson": 5,
        "minPerson": 2,
        "pricingType": "OccupancyBasedPricing"
      }
    ]
  }
}
```

Errors:

Error #1	Authentication failed.
Error #2	Hotel not found.

2. RateSync *(Mandatory)*

Description: This method updates the rates.

Prerequisites:

- Hotels have to be mapped.
- Rooms have to be mapped.
- Rates have to be mapped.

URL: http://partnerURL?action=RateSync

Type: POST

Request Parameters:

Data Field	Description	Data type	Occurrences
rateRequest	Root Object for Rate Sync	Object	1
rateRequest/hotelId	Mapped hotel id	String	1
rateRequest/username	Supplier username	String	1
rateRequest/password	Supplier password	String	1
rateRequest/room	Room object	Object	1
rateRequest/room/roomID	Mapped roomID	String	1
rateRequest/room/rates	Rates array	Array	1
rateRequest/room/rates/ratesObject	Rates object	Object	1..n
rateRequest/room/rates/ratesObject/rateID	Mapped RateID	String	1
rateRequest/room/rates/ratesObject/dates	Dates object array (contains date range objects)	Array	1
rateRequest/room/rates/ratesObject/dates/dateObject	Date range object	Object	1..n
rateRequest/room/rates/ratesObject/dates/dateObject/startDate	Start date of date range	String date (yyyy-mm-dd)	1
rateRequest/room/rates/ratesObject/dates/dateObject/endDate	End date of date range	String date (yyyy-mm-dd)	1
rateRequest/room/rates/ratesObject/dates/dateObject/minimumStay	Minimum stay	Integer	1
rateRequest/room/rates/ratesObject/dates/dateObject/advanceBookingDays	Advance booking days	Integer	1
rateRequest/room/rates/ratesObject/dates/dateObject/stopSell	Stop sell	Boolean	1
rateRequest/room/rates/ratesObject/dates/dateObject/closedOnArrival	Closed on arrival	Boolean	1
rateRequest/room/rates/ratesObject/dates/dateObject/closedOnDeparture	Closed on departure	Boolean	1

Data Field	Description	Data type	Occurrences
rateRequest/room/rates/ratesObject/dates/dateObject/prices	Prices array for occupancies	Array	1
rateRequest/room/rates/ratesObject/dates/dateObject/prices/priceObject	Price object for each occupancy combination	Object	1..n
rateRequest/room/rates/ratesObject/dates/dateObject/prices/priceObject/adult	Adult count	Integer (1 or more)	1
rateRequest/room/rates/ratesObject/dates/dateObject/prices/priceObject/childB	Big child count	Integer (0 or more)	1
rateRequest/room/rates/ratesObject/dates/dateObject/prices/priceObject/childA	Small child count	Integer (0 or more)	1
rateRequest/room/rates/ratesObject/dates/dateObject/prices/priceObject/infant	Infant Count	Integer (0 or more)	1
rateRequest/room/rates/ratesObject/dates/dateObject/prices/priceObject/price	Price for given occupancy combination	Float	1

Request Body:

```
{
  "rateRequest": {
    "hotelId": "hotelId",
    "username": "username",

            }
          ]
        }
      ]
    }
  }
}
```

Response Parameters:

Data Field	Description	Data Type	Occurrences
rateResponse	Root object of the response	Object	1
rateResponse/successful	Status of the response	Boolean	1
rateResponse/errors	Error message. Required if successful is set to false.	String	0..1

Response Body:

```
{
  "rateResponse": {
    "process": "RateSync",
    "successful": true,
    "errors": ""
  }
}
```

Errors:

Error #1	Authentication failed.
Error #2	Hotel does not exist.
Error #3	Date is not valid.
Error #4	Room does not exist.
Error #5	Rate does not exist.

3. AllotmentSync *(Mandatory)*

Description: This method sets the allotment of the target rooms.

Prerequisites:

- Hotels have to be mapped.
- Rooms have to be mapped.

URL: http://partnerURL?action=AllotmentSync

Type: POST

Request Parameters:

Data Field	Description	Data type	Occurrences
availabilityRequest	Root Object for Allotment Sync	Object	1
availabilityRequest/hotelId	Mapped hotel id	String	1
availabilityRequest/password	Supplier password	String	1
availabilityRequest/username	Supplier username	String	1
availabilityRequest/room	Room Object	Object	1
availabilityRequest/room/roomID	Mapped roomID	String	1
availabilityRequest/room/dates	Date objects array	Array	1
availabilityRequest/room/dates/ dateObject	Date object	Object	1..n
availabilityRequest/room/dates/ dateObject/startDate	Start date of date range	String Date (yyyy-mm-dd)	1
availabilityRequest/room/dates/ dateObject/endDate	End date of date range	String Date (yyyy-mm-dd)	1
availabilityRequest/room/dates/ dateObject/allotment	Allotment	Integer	1
availabilityRequest/room/dates/ dateObject/minimumStay	Minimum stay	Integer	1
availabilityRequest/room/dates/ dateObject/closedOnArrival	Closed on arrival	Boolean	1
availabilityRequest/room/dates/ dateObject/closedOnDeparture	Closed on departure	Boolean	1
availabilityRequest/room/dates/ dateObject/stopSell	Stop sell	Boolean	1
availabilityRequest/room/dates/ dateObject/advanceBookingDays	Advance booking days	Integer	1

Request Body:

```
{
  "availabilityRequest": {
    "hotelId": "hotelId",
    "username": "username",
    "password": "password",
    "room": {
      "roomId": "0445698b",
      "dates": [
        {
          "startDate": "2023-01-01",
          "endDate": "2023-03-25",
          "allotment": 25,
          "minimumStay": 1,
          "closedOnArrival": false,
          "closedOnDeparture": false,
          "stopSell": false,
          "advanceBookingDays": 2
        },
        {
          "startDate": "2023-03-26",
          "endDate": "2023-04-25",
          "allotment": 20,
          "minimumStay": 1,
          "closedOnArrival": false,
          "closedOnDeparture": false,
          "stopSell": true,
          "advanceBookingDays": 2
        }
      ]
    }
  }
}
```

Response Parameters:

Data Field	Description	Data Type	Occurrences
availabilityResponse	Root object of the response	Object	1
availabilityResponse/successful	Status of the response	Boolean	1
availabilityResponse/errors	Error message. Required if successful is set to false.	String	0..1

Response Body:

```
{
  "availabilityResponse": {
    "process": "AllotmentSync",
    "successful": true,
    "errors": ""
  }
}
```

Errors:

Error #1	Authentication failed.
Error #2	Hotel does not exist.
Error #3	Date is not valid.
Error #4	Room does not exist.
Error #5	Rate does not exist.

4. CCInValid *(Optional)*

Description: This method informs the channel that the given credit card information is not valid and reservation canceled due to that reason by the property owner. Is sent by the property owner.

Important Notes:

- This method does not guarantee the given credit card is valid or not, in terms of rejection from bank transaction. It is the asseveration and responsibility of the property owner.

Prerequisites:

- Reservation has been created.
- Reservation must include credit card information.

URL: http://partnerURL?action=CCInValid

Type: POST

Request Parameters:

Data Field	Description	Data type	Occurrences
invalidCreditCardRequest	Root object of request	Object	1
invalidCreditCardRequest/username	Supplier username	String	1
invalidCreditCardRequest/password	Supplier password	String	1
invalidCreditCardRequest/hotelId	Mapped hotel id	String	1
invalidCreditCardRequest/reservationId	Supplier Reservation ID	String	1
invalidCreditCardRequest/report	Definitive information	String	1

Request Body:

```
{
  "invalidCreditCardRequest": {
    "username": "username",
    "password": "password",
    "hotelId": "5889a41",
    "reservationId": "251633001",
    "report": "cancel_reservation_invalid_cc"
  }
}
```

Response Parameters:

Data Field	Description	Data type	Occurrences
invalidCreditCardResponse	Root object of response	Object	1
invalidCreditCardResponse/process	Process information	String	1
invalidCreditCardResponse/successful	Status of the response	Boolean	1
invalidCreditCardResponse/errors	Error message. Required if successful is set to false.	String	0..1

Response Body:

```
{
  "invalidCreditCardResponse": {
    "process": "InvalidCreditCardReport",
    "successful": true,
    "errors": ""
  }
}
```

5. NoShow *(Optional)*

Description: This method informs the channel that the guest(s) of the reservation are / are not checked-in or not attended the exact check-in date.

Important Notes:

- No Show Is sent by property owners and it is their asseveration and responsibility for the claim.

Prerequisites:

- Reservation has been created.
- Reservation check-in date should be passed or on the same exact day.

URL: http://partnerURL?action=NoShow

Type: POST

Request Parameters:

Data Field	Description	Data type	Occurrences
noShowRequest	Root object of request	Object	1
noShowRequest/username	Supplier username	String	1
noShowRequest/password	Supplier password	String	1
noShowRequest/hotelId	Mapped hotel id	String	1
noShowRequest/reservationId	Supplier Reservation ID	String	1
noShowRequest/report	Definitive information	String	1

Request Body:

```
{
  "noShowRequest": {
    "username": "username",
    "password": "password",
    "hotelId": "5889a41e5",
    "reservationId": "251633001",
    "report": "is_no_show"
  }
}
```

Response Parameters:

Data Field	Description	Data type	Occurrences
noShowResponse	Root object of response	Object	1
noShowResponse/process	Process information	String	1
noShowResponse/successful	Status of the response	Boolean	1
noShowResponse/errors	Error message. Required if successful is set to false.	String	0..1

Response Body:

```
{
  "noShowResponse": {
    "process": "NoShowReport",
    "successful": true,
    "errors": ""
  }
}
```

6. SendReservation *(Mandatory)*

Description: This method sends the reservation.

Important Notes:

- In the production environment; when all prerequisites met; If property has legacy bookings before activation of the integration, these past reservations are expected to be sent via this method with setting multiple reservations in Reservations[] array object.
- System will not respond with error or warning messages if the reservation dates are past dates, and will recognize them as past reservations in the central reservation system.

Prerequisites:

- Hotels have to be mapped.
- Rooms have to be mapped.
- Rates have to be mapped.
- Rates for the target rates should be sent.
- Allotment should be set and available.

Development URL:https://stage-xrs.booklogic.net/ws/maxi-channel/sync/reservation/xrs-channel/v5.3

Production URL: https://xrs.booklogic.net/ws/maxi-channel/sync/reservation/xrs-channel/v5.3

Type: POST

Request Parameters:

Data Field	Description	Data type	Occurrences
channelId	Channel id	Integer	1
username	Distributor username	String	1
password	Distributor password	String	1
subSource	In case of switch channel, the original source of reservation should be provided	String	0..1
reservations	Reservation Objects Array	Array	1
reservations/reservationObject	Reservation Object	Object	1..n
reservations/reservationObject/ reservationID	Reservation reference number	String	1
reservations/reservationObject/ hotelCode	Mapped hotel code	String	1
reservations/reservationObject/ hotelName	Name of the hotel of reservation	String	0..1
reservations/reservationObject/ currencyCode	Currency Code (ISO 4217)	String	1

Data Field	Description	Data type	Occurrences
reservations/reservationObject/time	Date Time of the booking	String (yyyy-mm-dd hh:mm:ss)	1
reservations/reservationObject/total	Total amount of the reservation (all taxes (included/excluded) should be included in this)	Float	1
reservations/reservationObject/ comissionAmount	Commission amount	Float	0..1
reservations/reservationObject/status	Status of the reservation. N: New, M: Modified, C: Canceled	String Enum (N|M|C)	1
reservations/reservationObject/ paymentType	Payment type. H for hotel collect and C for channel collect	String Enum (H|C)	1
reservations/reservationObject/ creditCard	Credit card object.	Object	0..1
reservations/reservationObject/ creditCard/number	Client Credit Card Number	String	1
reservations/reservationObject/ creditCard/cvc	Cvc of the credit card	String	0..1
reservations/reservationObject/ creditCard/owner	Card Holders Name	String	1
reservations/reservationObject/ creditCard/type	Credit Card Type Code. Refer to table 9.1. for card type codes	String Enum	1
reservations/reservationObject/ creditCard/expireMonth	Credit card expire month	String(mm)	1
reservations/reservationObject/ creditCard/expireYear	Credit card expire year	String(yyyy)	1
reservations/reservationObject/info	Reservation info object.	Object	0..1
reservations/reservationObject/info/ remarks	Notes of the reservation	String	0..1
reservations/reservationObject/info/ arrivalTime	Arrival time of guests	String (hh:mm)	0..1
reservations/reservationObject/info/ departureTime	Departure time of guests	String (hh:mm)	0..1
reservations/reservationObject/client	Client Object	Object	1
reservations/reservationObject/client/ firstName	First name of the client	String	1
reservations/reservationObject/client/ lastName	Last name of the client	String	1
reservations/reservationObject/client/ countryCode	Resident Country **ISO 3166 ALPHA-2 Code** of the client	String	1
reservations/reservationObject/client/ address	Address of the client	String	0..1

Data Field	Description	Data type	Occurrences
reservations/reservationObject/client/zip	Postal Code of the client	String	0..1
reservations/reservationObject/client/city	Resident city of the client	String	0..1
reservations/reservationObject/client/email	Email information of the client	String	0..1
reservations/reservationObject/client/phone	Contact phone number of client	String	0..1
reservations/reservationObject/rooms	Room list as an Array of the reservation	Array	1
reservations/reservationObject/rooms/roomObject	Room object	Object	1..n
reservations/reservationObject/rooms/roomObject/id	Mapped room id of the room	String	1
reservations/reservationObject/rooms/roomObject/name	Room name	String	1
reservations/reservationObject/rooms/roomObject/adult	Adult count of the room	Integer (at least 1)	1
reservations/reservationObject/rooms/roomObject/childB	Older child count of the room	Integer	1
reservations/reservationObject/rooms/roomObject/childA	Younger child count of the room. If no 2 child categories are supported, then send this one always as 0.	Integer	1
reservations/reservationObject/rooms/roomObject/infant	Infant count of the room	Integer	1
reservations/reservationObject/rooms/roomObject/checkInDate	Check–in date	String (yyyy-mm-dd)	1
reservations/reservationObject/rooms/roomObject/checkOutDate	Check-out date	String (yyyy-mm-dd)	1
reservations/reservationObject/rooms/roomObject/total	Total cost of the room (all taxes (included/excluded) should be included in this)	Float	1
reservations/reservationObject/rooms/roomObject/currencyCode	Currency Code (ISO 4217)	String	1
reservations/reservationObject/rooms/roomObject/info	Room information object	Object	0..1
reservations/reservationObject/rooms/roomObject/info/notes	Room notes	String	0..1
reservations/reservationObject/rooms/roomObject/info/isSmoking	Is smoking room	Boolean	0..1
reservations/reservationObject/rooms/roomObject/guests	Guests array	Array	1

Data Field	Description	Data type	Occurrences
reservations/reservationObject/ rooms/roomObject/guests/ guestObject	Guest object. Must be one for each guest.	Object	1..n
reservations/reservationObject/ rooms/roomObject/guests/ guestObject/firstName	First name of guest	String	1
reservations/reservationObject/ rooms/roomObject/guests/ guestObject/lastName	Last name of guest	String	1
reservations/reservationObject/ rooms/roomObject/guests/ guestObject/type	Type code of guest. Refer to table 9.2. for guest type codes	String Enum	1
reservations/reservationObject/ rooms/roomObject/rate/id	Rate id	String	1
reservations/reservationObject/ rooms/roomObject/rate/dailyPrices	Daily prices array	Array	1
reservations/reservationObject/ rooms/roomObject/rate/dailyPrices/ dailyPriceObject	Daily price object. There must be one for every stay day.	Object	1..n
reservations/reservationObject/ rooms/roomObject/rate/dailyPrices/ dailyPriceObject/date	Date of daily price	String (yyyy-mm-dd)	1
reservations/reservationObject/ rooms/roomObject/rate/dailyPrices/ dailyPriceObject/price	Price of day (should include included taxes and exclude excluded taxes)	Float	1
reservations/reservationObject/ rooms/roomObject/taxes	Tax objects array	Array	0..1
reservations/reservationObject/ rooms/roomObject/taxes/taxesObject	Tax object	Object	1..n
reservations/reservationObject/ rooms/roomObject/taxes/ taxesObject/name	Tax name	String	1
reservations/reservationObject/ rooms/roomObject/taxes/ taxesObject/amount	Tax amount	Float	1
reservations/reservationObject/ rooms/roomObject/taxes/ taxesObject/included	Is tax included	Boolean	1

7. HotelList *(Optional)*

Description: This method returns the hotel list.

Prerequisites:

- Hotels have to be mapped.

Development URL: https://stage-xrs.booklogic.net/ws/maxi-channel/xrs/v5.3/hotels

Production URL: https://xrs.booklogic.net/ws/maxi-channel/xrs/v5.3/hotels

Type: POST

Request Parameters:

Data Field	Description	Data type	Occurrences
channelId	Channel Id you will get from BookLogic	Integer	1
username	Distributor password	String	1
password	Distributor username	String	1

Request Body:

```
{
  "channelId": channelId,
  "username": "username",
  "password": "password"
}
```

Response Parameters:

Data Field	Description	Data type	Occurrences
hotelsResponse	Root object of response	Object	1
hotelsResponse/successful	Status of the response	Boolean	1
hotelsResponse/error	Error object. Present in case of successful is false	Object	0..1
hotelsResponse/error/code	Error code (Refer to table below response for possible errors)	String	1
hotelsResponse/error/message	Error message	String	1
hotelsResponse/hotels	Hotels array in case of successful response	Array	1
hotelsResponse/hotels/hotelObject	Hotel object	Object	1..n
hotelsResponse/hotels/hotelObject/name	Hotel name	String	1
hotelsResponse/hotels/hotelObject/code	Hotel code	String	1
hotelsResponse/hotels/hotelObject/class	Class object	Object	1
hotelsResponse/hotels/hotelObject/ class/code	Hotel class code (refer to table 9.3. for class codes)	String	1
hotelsResponse/hotels/hotelObject/ class/name	Hotel class name	String	1
hotelsResponse/hotels/hotelObject/type	Hotel type object	Object	1
hotelsResponse/hotels/hotelObject/ type/code	Type code (refer to table 9.4. For type codes)	String	1
hotelsResponse/hotels/hotelObject/ type/name	Type name	String	1
hotelsResponse/hotels/hotelObject/ location	Location object	Object	1

8. HotelInfo *(Optional)*

Description: This method returns the hotel data.

Prerequisites:

- Hotels have to be mapped.

Development URL: https://stage-xrs.booklogic.net/ws/maxi-channel/xrs/v5.3/hotel/hotelCode

Production URL: https://xrs.booklogic.net/ws/maxi-channel/xrs/v5.3/hotel/hotelCode

Type: POST

Parameters:

Data Field	Description	Data type	Occurrences
channelId	Channel Id you will get from BookLogic	Integer	1
username	Distributor password	String	1
password	Distributor username	String	1

Request:

```
{
  "channelId": channelId,
  "username": "username",
  "password": "password"
}
```

Response Parameters:

Data Field	Description	Data type	Occurrences
hotelInfoResponse	Root object of response	Object	1
hotelInfoResponse/successful	Status of the response	Boolean	1
hotelInfoResponse/error	Error object. Present in case of successful is false	Object	0..1
hotelInfoResponse/error/code	Error code (Refer to table below response for possible errors)	String	1
hotelInfoResponse/error/message	Error message	String	1
hotelInfoResponse/hotel	Hotel object	Object	1
hotelInfoResponse/hotel/name	Hotel name	String	1
hotelInfoResponse/hotel/code	Hotel code	String	1
hotelInfoResponse/hotel/channelCodes	Channel Hotel Codes Object	Object	1
hotelInfoResponse/hotel/channelCodes/ agodaCode	Hotel's Agoda Code	String	0..1
hotelInfoResponse/hotel/channelCodes/ bookingCode	Hotel's Booking Code	String	0..1
hotelInfoResponse/hotel/channelCodes/ expediaCode	Hotel's Expedia Code	String	0..1
hotelInfoResponse/hotel/channelCodes/ hotelbedsCode	Hotel's Hotelbeds Code	String	0..1
hotelInfoResponse/hotel/class	Class object	Object	1
hotelInfoResponse/hotel/class/code	Hotel class code (refer to table 9.3. for class codes)	String	1
hotelInfoResponse/hotel/class/name	Hotel class name	String	1
hotelInfoResponse/hotel/type	Hotel type object	Object	1
hotelInfoResponse/hotel/type/code	Type code (refer to table 9.4. For type codes)	String	1
hotelInfoResponse/hotel/type/name	Type name	String	1
hotelInfoResponse/hotel/location	Location object	Object	1
hotelInfoResponse/hotel/location/address	Address	String	1
hotelInfoResponse/hotel/location/city	City	String	1
hotelInfoResponse/hotel/location/country	Country object	Object	1
hotelInfoResponse/hotel/location/country/ code	Country code **(ISO 3166 ALPHA-2 Code)**	String	1
hotelInfoResponse/hotel/location/country/ name	Country name	String	1
hotelInfoResponse/hotel/location/zip	Zip of hotel	String	1
hotelInfoResponse/hotel/location/latitude	Latitude of hotel location	String	1
hotelInfoResponse/hotel/location/longitude	Longitude of hotel location	String	1

Data Field	Description	Data type	Occurrences
hotelInfoResponse/hotel/contact	Contact object	Object	1
hotelInfoResponse/hotel/contact/phone	Hotel contact phone number	String	1
hotelInfoResponse/hotel/contact/email	Hotel contact email adress	String	1
hotelInfoResponse/hotel/contact/website	Hotel website	String	0..1
hotelInfoResponse/hotel/currencyCode	Hotel currency Code (ISO 4217)	Integer	1
hotelInfoResponse/hotel/childBMaxAge	Hotel maximum older child age	Integer	0..1
hotelInfoResponse/hotel/childAMaxAge	Hotel maximum younger child age	Integer	0..1
hotelInfoResponse/hotel/infantMaxAge	Hotel maximum infant age	Integer	0..1
hotelInfoResponse/hotel/images	Images array	Array	0..1
hotelInfoResponse/hotel/images/ imageObject	Image object	Object	1..n
hotelInfoResponse/hotel/images/ imageObject/url	Image url	String	1
hotelInfoResponse/hotel/images/ imageObject/type	Image type object	Object	1
hotelInfoResponse/hotel/images/ imageObject/type/code	Image category type code. Refer to table 9.8. For category types)	String	1
hotelInfoResponse/hotel/images/ imageObject/type/name	Image type name	String	1
hotelInfoResponse/hotel/facilities	Facilities array	Array	0..1
hotelInfoResponse/hotel/facilities/ facilityObject	Facility object	Object	1..n
hotelInfoResponse/hotel/facilities/ facilityObject/code	Facility code. Refer to table 9.9. For facility types)	String	1
hotelInfoResponse/hotel/facilities/ facilityObject/name	Facility name	String	1
hotelInfoResponse/hotel/rooms	Rooms array	Array	1
hotelInfoResponse/hotel/rooms/ roomObject	Room object	Object	1..n
hotelInfoResponse/hotel/rooms/ roomObject/id	Room id	Integer	1
hotelInfoResponse/hotel/rooms/ roomObject/name	Room name	String	1
hotelInfoResponse/hotel/rooms/ roomObject/minPerson	Room minimum person	Integer	1
hotelInfoResponse/hotel/rooms/ roomObject/maxAdultCount	Room maximum adults	Integer	1
hotelInfoResponse/hotel/rooms/ roomObject/maxChildBCount	Room maximum older child	Integer	1

Data Field	Description	Data type	Occurrences
hotelInfoResponse/hotel/rooms/ roomObject/maxChildACount	Room maximum young child	Integer	1
hotelInfoResponse/hotel/rooms/ roomObject/maxInfantCount	Room maximum infants	Integer	1
hotelInfoResponse/hotel/rooms/ roomObject/view	Room view type object	Object	1
hotelInfoResponse/hotel/rooms/ roomObject/view/code	Room view type code. Refer to table 9.5. for room view types)	String	1
hotelInfoResponse/hotel/rooms/ roomObject/view/name	Room view type name	String	1
hotelInfoResponse/hotel/rooms/ roomObject/category	Room category object	Object	1
hotelInfoResponse/hotel/rooms/ roomObject/category/code	Room category type code. Refer to table 9.6. for room category types)	String	1
hotelInfoResponse/hotel/rooms/ roomObject/category/name	Room category name	String	1
hotelInfoResponse/hotel/rooms/ roomObject/images	Images array	Array	0..1
hotelInfoResponse/hotel/rooms/ roomObject/images/image	Image url	String	1..n
hotelInfoResponse/hotel/rooms/ roomObject/facilities	Room facilities array	Array	0..1
hotelInfoResponse/hotel/rooms/ roomObject/facilities/facilityObject	Facility object	Object	1..n
hotelInfoResponse/hotel/rooms/ roomObject/facilities/facilityObject/code	Facility code. Refer to table 9.9. For facility types)	String	1
hotelInfoResponse/hotel/rooms/ roomObject/facilities/facilityObject/name	Facility name	String	1
hotelInfoResponse/hotel/rates	Rates array	Array	1
hotelInfoResponse/hotel/rates/rateObject	Rate object	Object	1..n
hotelInfoResponse/hotel/rates/rateObject/ id	Rate id	Integer	1
hotelInfoResponse/hotel/rates/rateObject/ name	Rate name	String	1
hotelInfoResponse/hotel/rates/rateObject/ roomId	ID of the room to which the rate level belongs	Integer	1
hotelInfoResponse/hotel/rates/rateObject/ currencyCode	Rate currency Code (ISO 4217)	String	1
hotelInfoResponse/hotel/rates/rateObject/ type	Rate type object	Object	1
hotelInfoResponse/hotel/rates/rateObject/ type/b2b	Is rate B2B (can be both B2C and B2B at the same time)	Boolean	1

Data Field	Description	Data type	Occurrences
hotelInfoResponse/hotel/rates/rateObject/type/b2c	Is rate B2C (can be both B2C and B2B at the same time)	Boolean	1
hotelInfoResponse/hotel/rates/rateObject/cancellationPolicy	Cancellation policy object	Object	1
hotelInfoResponse/hotel/rates/rateObject/cancellationPolicy/id	Cancellation policy id	Integer	1
hotelInfoResponse/hotel/rates/rateObject/cancellationPolicy/name	Cancellation policy name	String	1
hotelInfoResponse/hotel/rates/rateObject/cancellationPolicy/rules	Cancellation policy rules array	Array	1
hotelInfoResponse/hotel/rates/rateObject/cancellationPolicy/rules/ruleObject	Rule object. It will contain a remaining hours value and one of percentage, fixed amount, night value.	Object	1..n
hotelInfoResponse/hotel/rates/rateObject/cancellationPolicy/rules/ruleObject/remainingHours	The remaining hours after which the penalty will be applied.	Integer	1
hotelInfoResponse/hotel/rates/rateObject/cancellationPolicy/rules/ruleObject/percentage	Penalty percentage	Float	0..1
hotelInfoResponse/hotel/rates/rateObject/cancellationPolicy/rules/ruleObject/fixedAmount	Penalty fixed amount	Float	0..1
hotelInfoResponse/hotel/rates/rateObject/cancellationPolicy/rules/ruleObject/nights	Penalty nights	Integer	0..1
hotelInfoResponse/hotel/rates/rateObject/nationalities	Rate allowed nationalities array	Array	1
hotelInfoResponse/hotel/rates/rateObject/nationalities/nationality	Nationality country **ISO 3166 ALPHA-2 Code**	String	0..n

9. BookLogic Static Types

Tables in sections below indicate BookLogic's static data types.

9.1. Credit Card Types

Code	Name
AMX	American Express
DIN	DinersClub
DSC	Discover
JBE	JBE
JCB	JCB
MAE	Maestro
MCA	MasterCard
VIS	Visa

9.2. Guest Types

Code	Name
ADULT	Adult
CHILDB	Old Child
CHILDA	Young Child
INFANT	Infant

9.3. Hotel Class Types

Code	Name
1*	1 Star
2*	2 Star
3*	3 Star
4*	4 Star
5*	5 Star
NS	No Star

9.4. Hotel Types

Code	Name
1	All Suite
2	All Inclusive Resort
3	Apartment
5	Cabin or Bungalow
6	Campground
7	Chalet
15	Guest Farm
16	Guest House, Limited Service
17	Health Spa
18	Holiday Resort
19	Hostel
20	Hotel
22	Lodge
27	Motel
30	Resort
33	Tent
34	Vacation Home
35	Villa
40	Pension
45	Boutique
51	Charm Hotel
53	Vacation Rental

9.5. Room View Types

Code	Name
1	Airport View
2	Bay View
3	City View
4	Courtyard View
5	Golf View
6	Harbor View
7	Intercoastal View
8	Lake View
9	Marina View
